The intention of the survey was to collect valid data from the whole spectrum of readers of the TIPA-magazines.

A basic questionnaire was used for the purpose of comparability and to incorporate the results.

For 19 magazines an online-survey with identical questionnaire was published on http://presseforschung.de.
1. Skeleton Data - Synopsis

Coordinated readership survey with self-administered questionnaires. Parallel online-survey for 19 magazines.

Duration: October 22\textsuperscript{nd} 2010 – February 24\textsuperscript{th} 2011

Participants: 23 magazines from 14 countries

Total returns $N = 10\,281$
Analysed returns: $Na = 8\,195$

Returns by mail: 41.1 %
Returns by fax: 11.6 %
Returns online: 47.0 %

Implementation of the survey - concept, recording, analysis:
WIP Wissenschaftliches Institut für Presseforschung und Medienberatung, Cologne
Returns

The returns for each magazine were recorded separately.

There was a large degree of fluctuation, with the smallest feedback consisting of 103 questionnaires and the largest consisting of 2,695. The analysed returns ranged from 103 to 1,436.

On average, each magazine achieved an return rate of 446 questionnaires.
